Survey users

(Author: Trịnh Khánh Linh | Reviewer: Trần Anh Kiệt | Editor: Trịnh Khánh Linh)  **Survey**

References:

- **Survey Form:** [Khảo sát nhu cầu người dùng về hiến máu](#)
- **Analysis Report:** [KHẢO SÁT NHU CẦU NGƯỜI VỀ HIẾN MÁU.pdf](#)

Key findings from the survey:

- *Blood donation information is fragmented:* Most participants learn about donation campaigns through schools and social media rather than official healthcare channels, making it difficult to access reliable and centralized information.
- *Eligibility uncertainty is the biggest barrier:* Many respondents are unsure whether they meet blood donation requirements, indicating a need for clearer guidance and support before registration.
- *Post-donation health is a common concern:* Most respondents pay attention to their health after donating blood and actively seek information about recovery and self-care.
- *Users rely heavily on external information sources:* Google and healthcare professionals are the primary sources of post-donation health information, suggesting a demand for trustworthy guidance within the platform itself.
- *Interest in AI-powered assistance is positive:* Nearly half of respondents rated their interest in an AI chatbot at 4-5 out of 5, showing potential for AI-assisted guidance and post-donation support.
- *Users value convenience and timely communication:* Respondents showed strong interest in features that simplify blood donation, such as event discovery, donation reminders, and emergency blood request notifications.

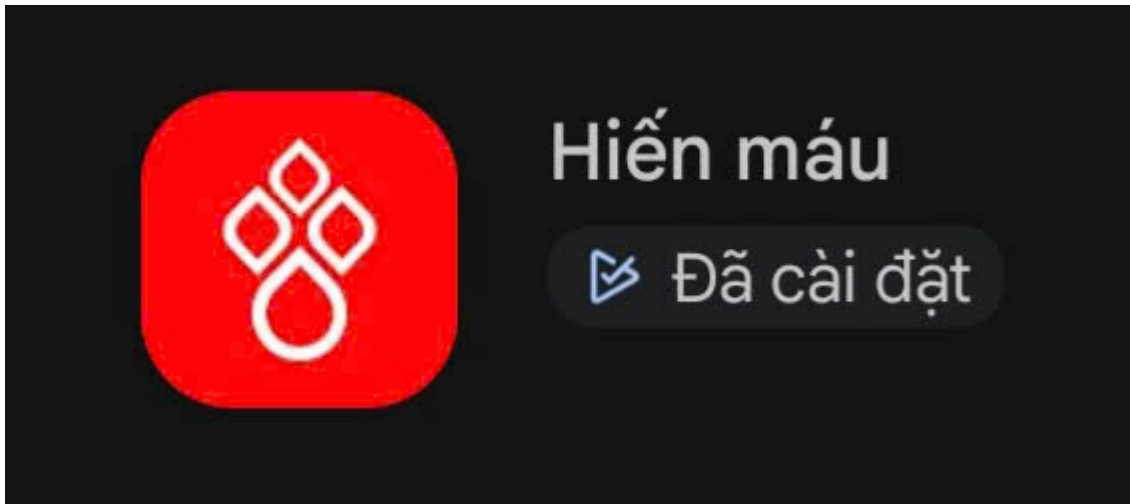

Implication: Potential donors need a centralized platform that simplifies the donation process, provides reliable health guidance, and helps them stay engaged through personalized support and timely notifications.

App Hiến Máu (Mobile Application)

(Author: Trần Minh Triết | Reviewer : Trần Đức Quý | Editor: Trần Đức Quý)

App Overview

This application allows blood donors to look up information regarding blood donation, find donation centers, check the blood demand of various hospitals, register to donate blood conveniently, keep track of their personal blood donation history, trace the journey of their donated blood units, etc.

User Groups

Blood Donors

- Register to donate blood
- Track donation history
- Receive results

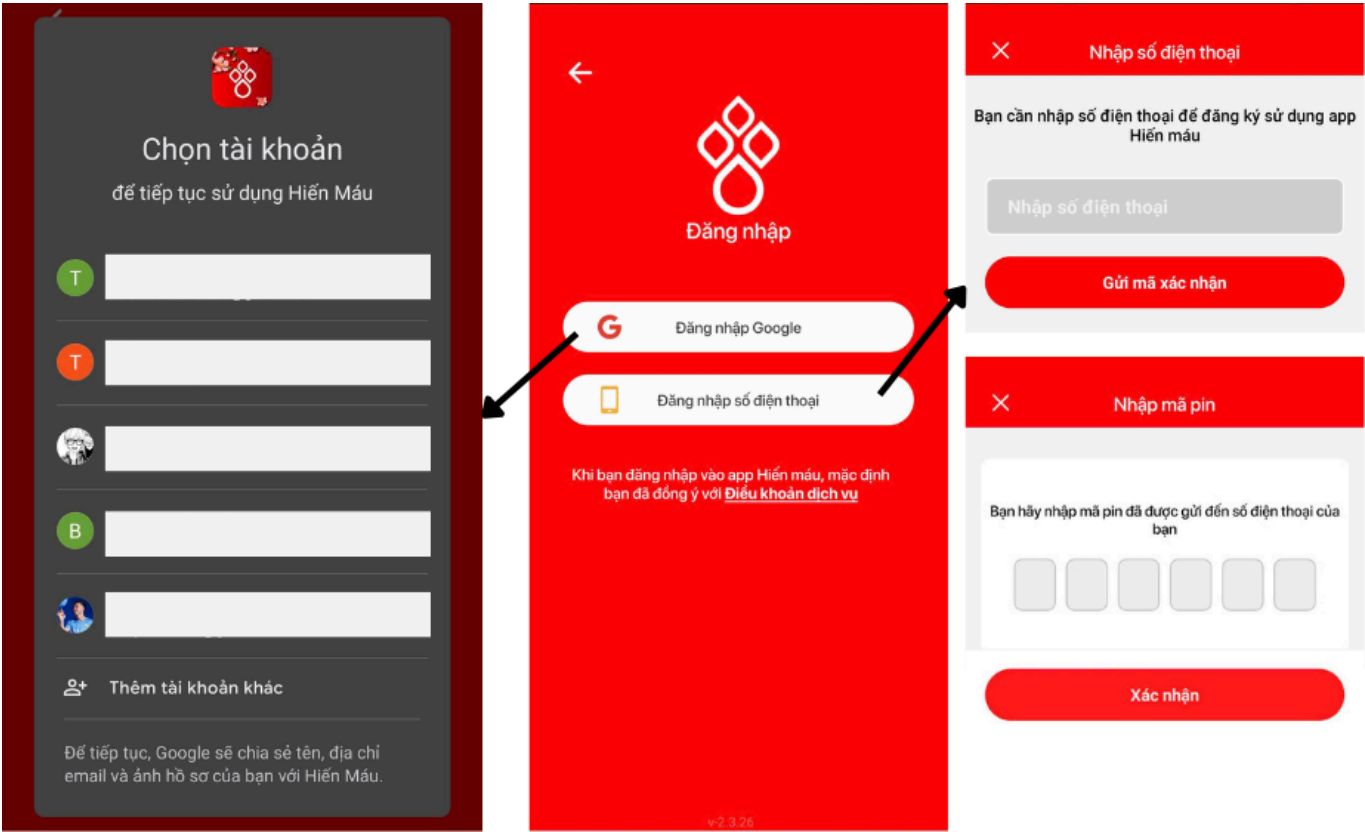

Blood Donation Centers

- Accept registered donors
- Manage blood donation data

Main Functions

Registration - Login

Users can register or log in using 2 main methods: Google (GG) Account or Phone Number.

Bottom Navigation Bar

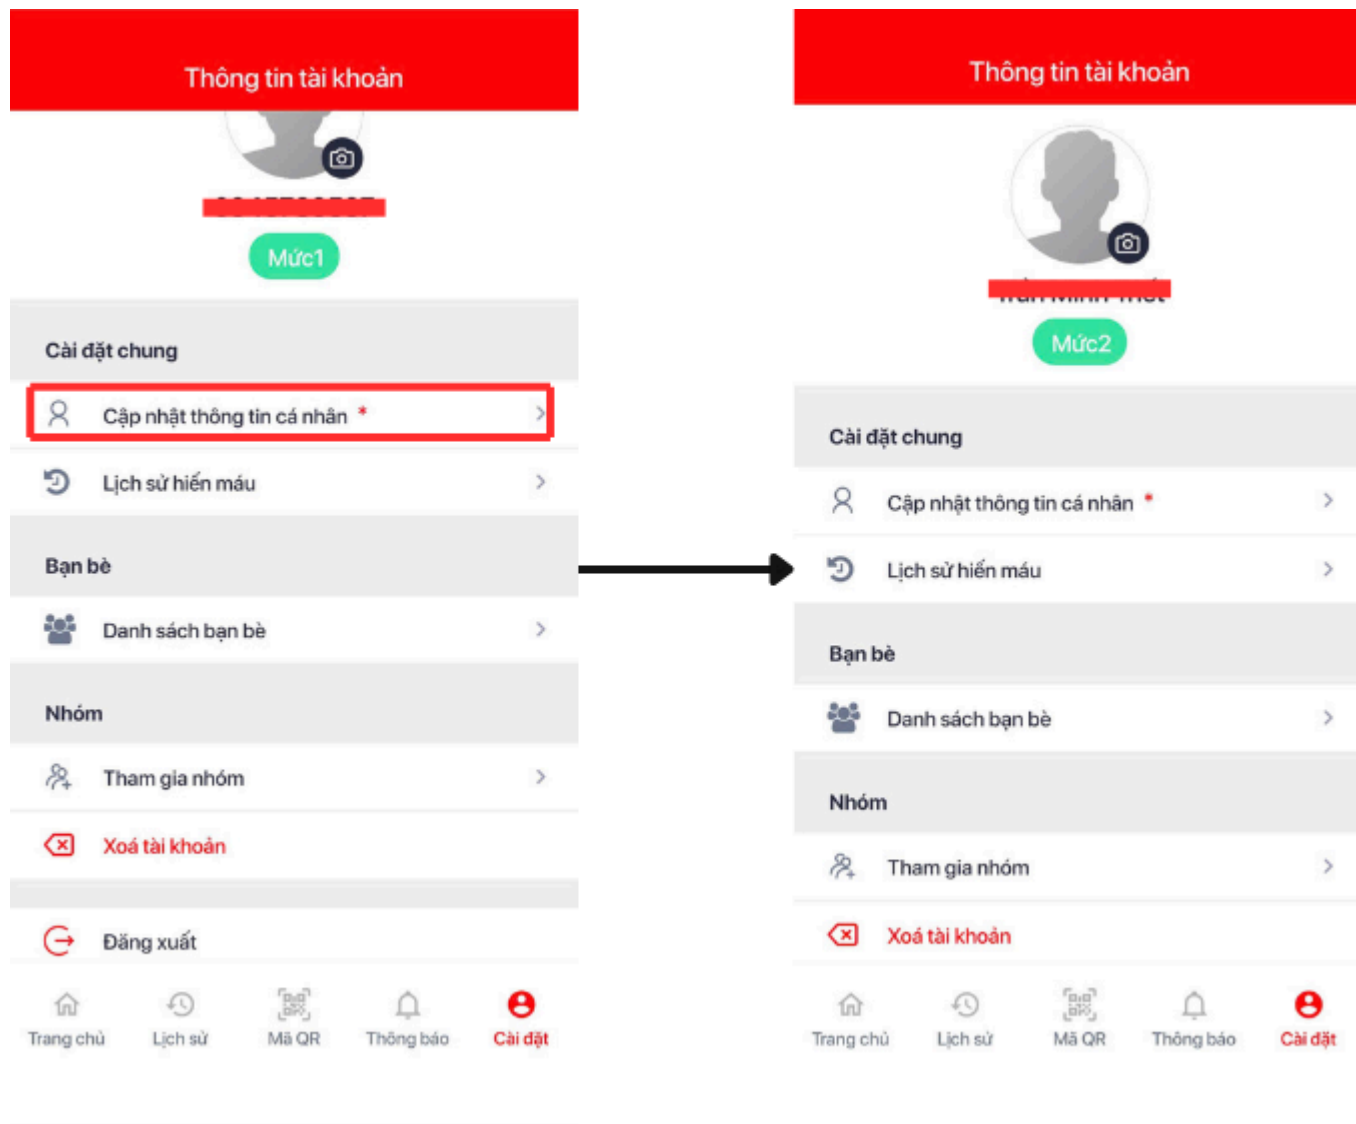

Includes 5 sections:

Section	Function
Home (Trang chủ)	Main screen interface
History (Lịch sử)	View blood donation history
QR Code (Mã QR)	Digital identification for blood donors
Notifications (Thông báo)	Receive system notifications
Settings (Cài đặt)	Account settings & profile management

Settings - User Profile Management

Newly created accounts start at Level 1, which does not satisfy the criteria to register a blood donation schedule or interact with crucial app functions. Users must update their personal information as required to upgrade to Level 2 and use the app's functions.

Additionally, the settings section manages all user information: friends list and communities/groups they have joined. Users who want to log out of their accounts must do so here. Below is the main information kept by the profile management section:

**CÁC GÓI XÉT NGHIỆM
QUÀ TẶNG**

Located at the top of the interface, styled with the distinctive red color of the transfusion medicine sector.

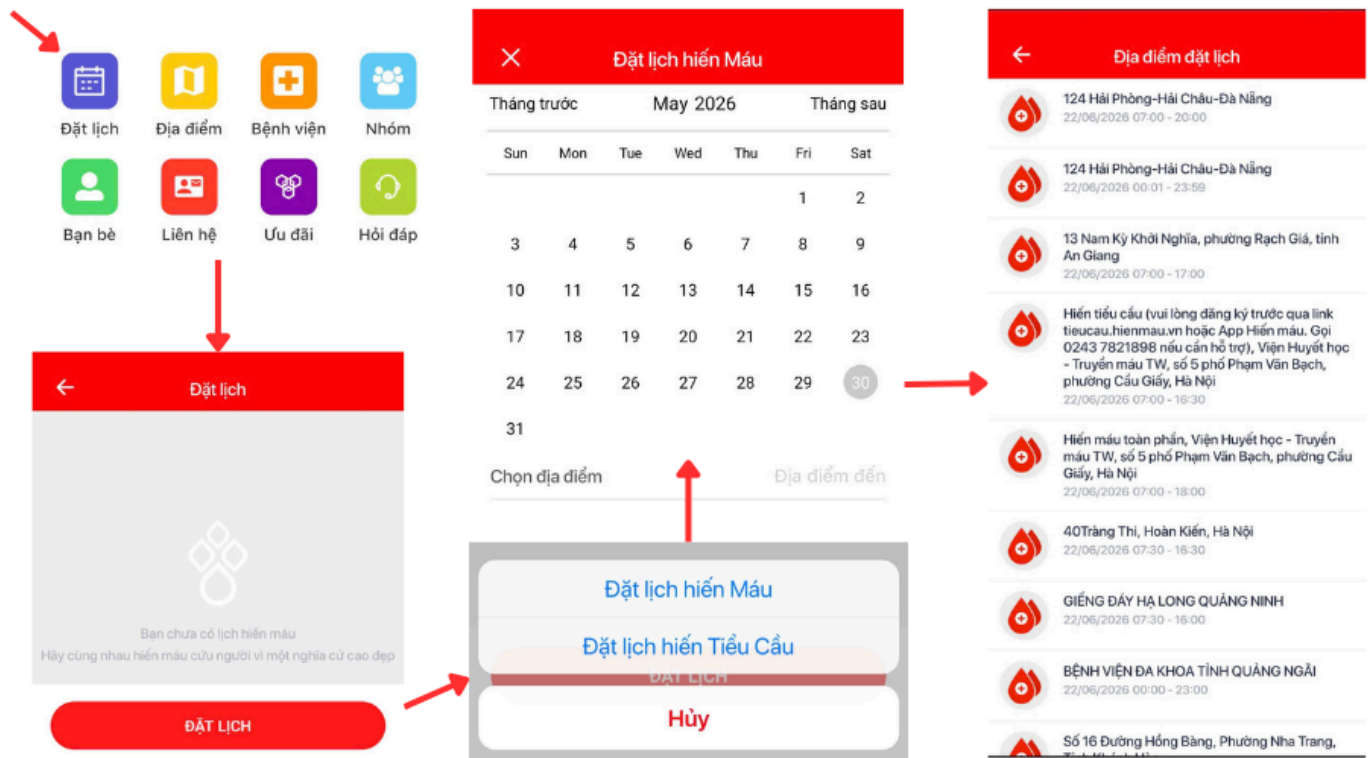

- Welcome greeting: "Hello, [User Name]"
- Status notification: "You are eligible to donate blood!"
- User avatar, blood type information, and total count of successful blood donations.
- Quick access menu:

Function	Purpose
Book Appointment (Đặt lịch)	Register a blood donation schedule
Location (Địa điểm)	Find blood donation centers
Hospital (Bệnh viện)	Look up affiliated hospitals
Groups (Nhóm)	Join the blood donation community
Friends (Bạn bè)	Connect with other users
Contact (Liên hệ)	Customer support
Offers (Ưu đãi)	View donor benefits & incentives
Q&A (Hỏi đáp)	Look up frequently asked questions

Below the menu is a promotional banner: "Gift health check packages for blood donors" which conveys incentive information and encourages users to continue participating.

Home Page Function Groups

Book Appointment (Đặt lịch)

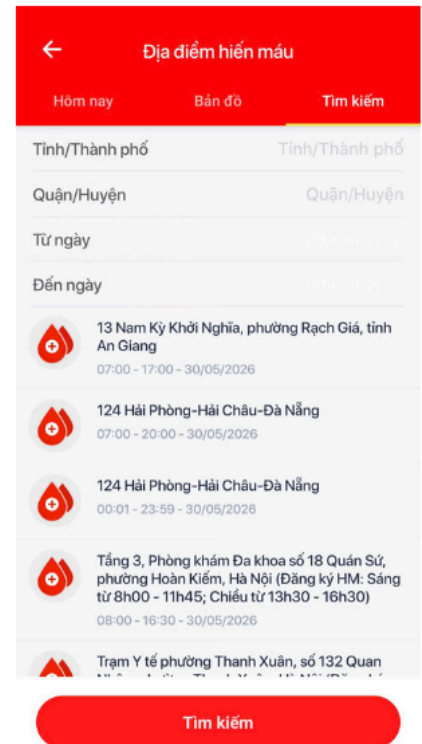

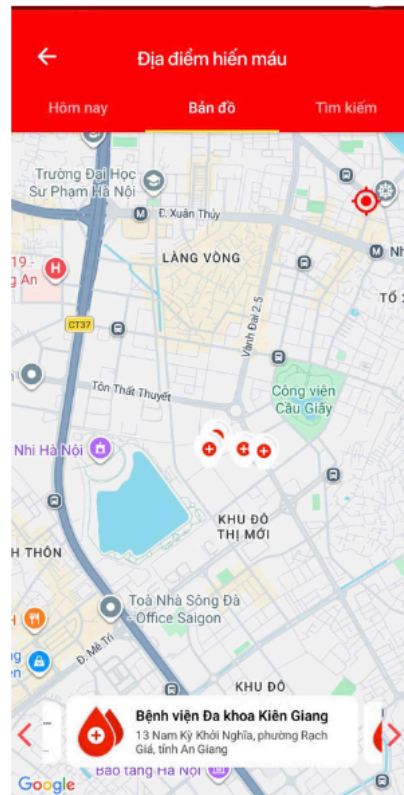

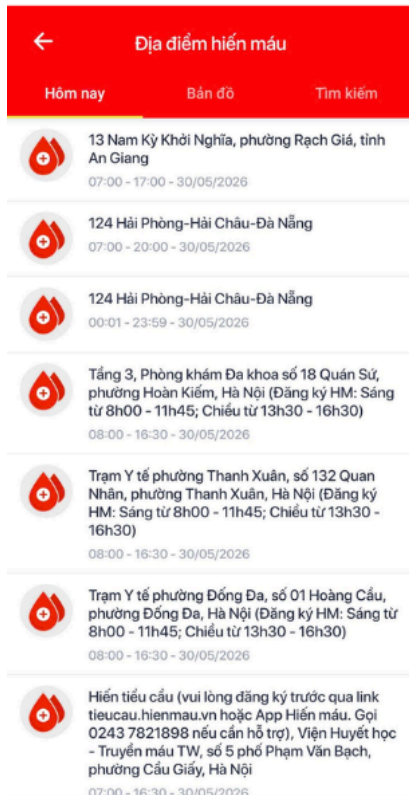

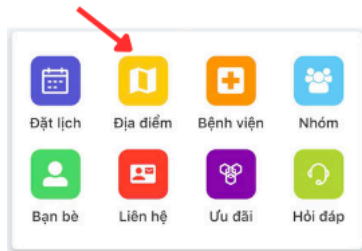

The Blood Donation Scheduling feature allows users to pre-register for a donation session by creating an online registration form on the system. Once saved, the appointment information will be used to help manage participant numbers and send timely reminder notifications according to the registered schedule.

To create an appointment, users need to provide the following information:

- Donation Type: Choose between whole blood donation or platelet donation.
- Desired Donation Date: Select a time that fits your personal schedule.
- Donation Location: Choose the facility or blood donation center you wish to attend.

After completing the registration, the system will save the appointment details to the user's personal profile, send confirmation notifications, and provide reminders before the donation day to help users proactively arrange their time to attend.

Location (Địa điểm)

The Locations function helps users search for and find suitable locations to participate in blood or platelet donation. The information is organized visually, making it easy for users to identify the nearest blood donation center and register.

- Today: Displays a list of blood donation centers that are currently operating on the current day, helping users quickly access locations where they can participate.
- Map: Provides an interactive map that allows users to view the actual location of blood donation points. Users can zoom in, zoom out, or select individual locations to view detailed information.
- Search: Supports searching for locations based on system-provided criteria such as province, city, or other administrative region, making the search faster and more convenient.

Through these tools, users can select a location that suits their personal needs and register to donate blood at the corresponding organization.

Screening Survey for Blood Donation Registration

After selecting their desired blood donation location, users need to complete the Blood Donation Registration Form to submit their request to the organizing unit.

The registration form includes survey questions and necessary information to support the initial screening process and assess the applicant's suitability for blood donation. After completion, the information will be

sent to the receiving unit for review and approval. Once the application is accepted, users will receive a notification from the system or from the organizing unit to confirm the appointment and instructions for the next steps before going to the blood donation location.

This process helps ensure that blood donation is conducted in an organized manner, while also assisting management units in proactively controlling the number of participants at each location.

Trung tâm Máu Quốc gia - Gạn tiểu cầu

Q&A (Hỏi đáp)

Provides answers to common questions about donation criteria and app usage.

History (Lịch sử)

The Blood Donation History function allows users to track all blood donations they have made on the system. The history list is sorted by time, displaying basic information such as the donation date, donation location, type of donation, and completion status. Users can select any donation from the list to view detailed information. Each record provides complete relevant data such as the time of donation, receiving location, blood type, amount of blood donated, test results (if provided), donation certificate, and benefits received after participation. This function helps users easily manage their personal history, look up past blood donations, and track their contributions to the community.

QR Code (Mã QR)

The QR code identification function provides each user with a personal QR code linked to their account on the system. The QR code acts as an electronic identifier, allowing for quick verification of blood donor information at collection points without manual data entry. Upon arrival at the blood donation site, users simply present the QR code on the application. Medical staff or receiving staff can use a scanner to quickly access the approved records, including basic personal information, blood type, blood donation history, eligibility status, and registered appointment schedule. Using QR codes shortens processing time, reduces errors in information verification, and improves management efficiency at blood donation sites. Simultaneously, the system can automatically record the user's presence and update the status of the blood donation session immediately after the reception process is complete.

Notifications (Thông báo)

The Notifications function is where important information related to blood donation schedules and user activity on the system is concentrated. After successfully scheduling an appointment, users will receive confirmation notifications and reminders of the time and location for blood donation to ensure they do not miss their scheduled appointment. In addition, notifications will also include updates on the status of the application for review, approval results, and information about the community and groups, helping users stay updated with all relevant activities.

User flow

To complete registration and participate in a donation session, users follow these steps:

1. Register or log in to the system and update all personal details in the profile.
2. Access Location from the Home Page and select a center via the list or interactive map.
3. Complete the health screening survey and submit it for review.
4. Track approval results in Notifications.
5. Select a suitable date for the booking.
6. Present the personal identification QR code at the physical site for scanning.
7. After completing the donation, view detailed logs in History.
8. Connect with other donors using Friends and Groups.
9. Use the Q&A function to learn about donation guidelines.

10. Access Contact to receive help from management.

Giọt Máu Vàng App (Mobile Application)

(Author: Trần Anh Kiệt | Reviewer: Trần Đức Quý | Editor: Trần Đức Quý)

App Overview

This application allows blood donors to easily track the time and location of blood donation events, while knowing related details such as the specific blood groups needed and the required quantities to facilitate their choices. In addition, the application supports online donation registration, reducing manual form-filling times at the physical sites.

User Groups

Blood Donors

- Register for blood donations online.
- Rate and review donation events or centers.
- Track personal blood donation history.

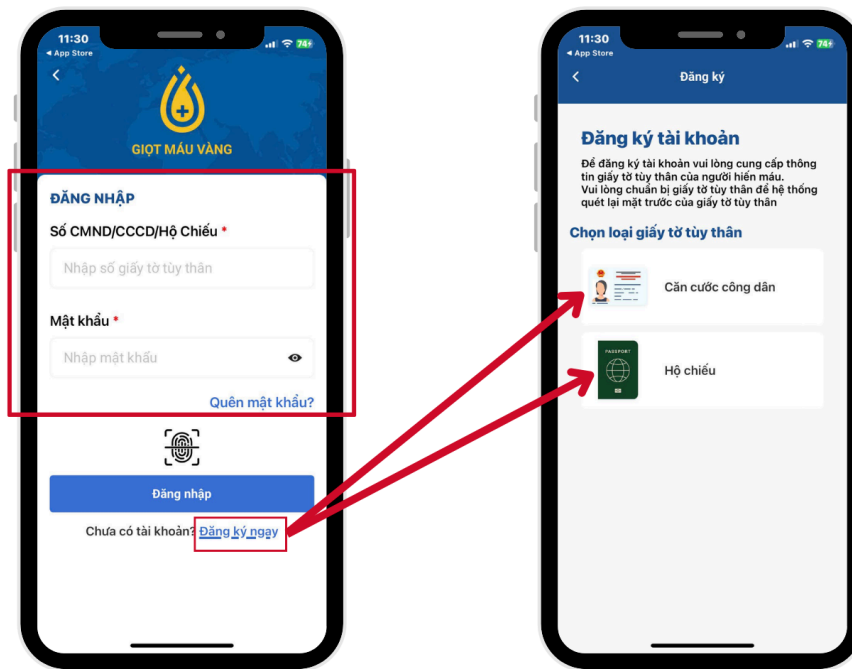

Blood Donation Centers

- Accept registered donors.
- Manage blood donation data.

Main Functions

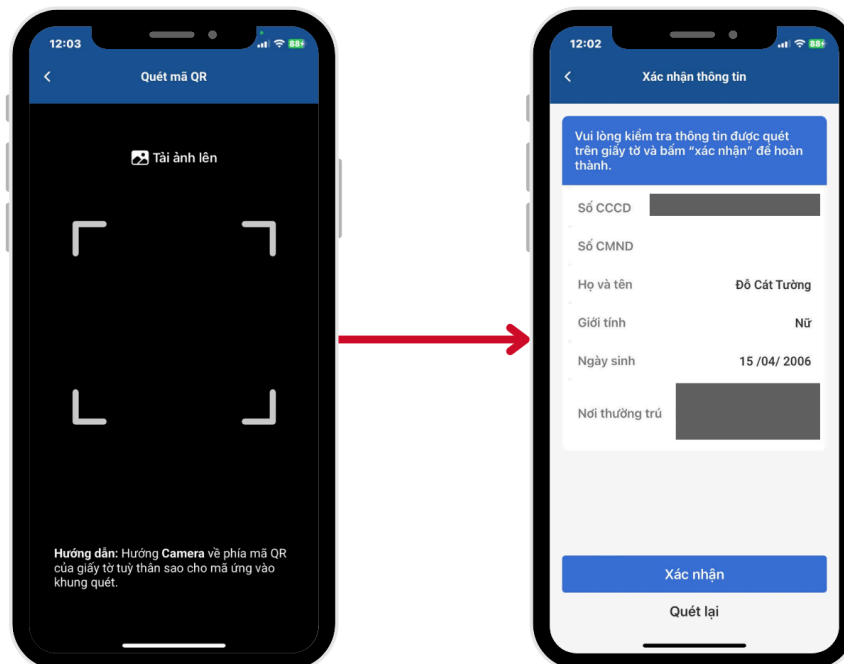

Registration - Login

Account registration via 2 main methods by providing government identification (National ID - CCCD or Passport).

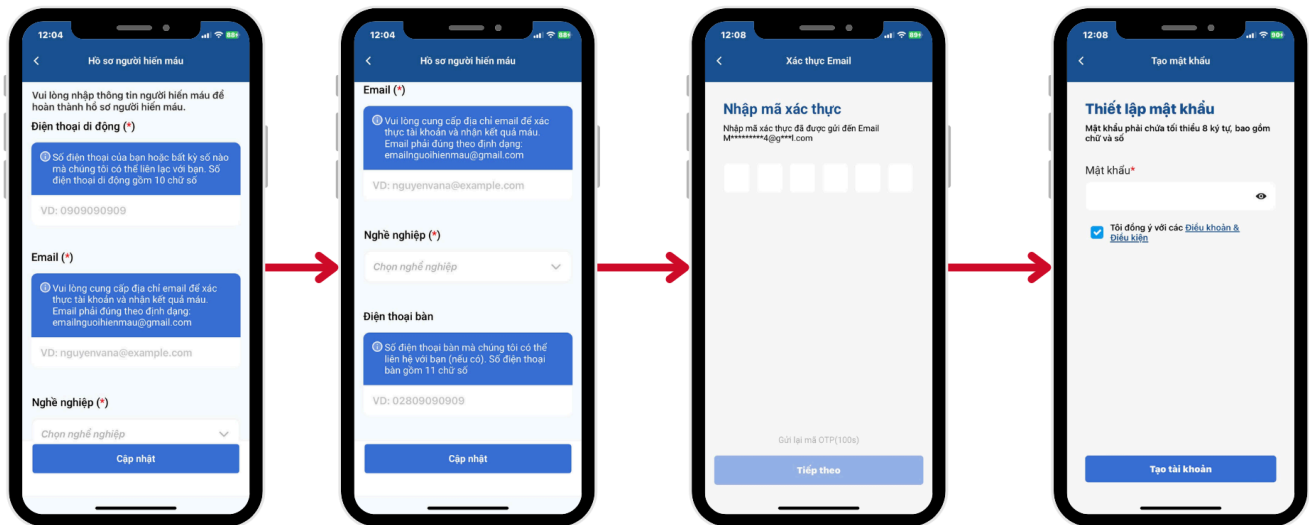

CCCD Registration:

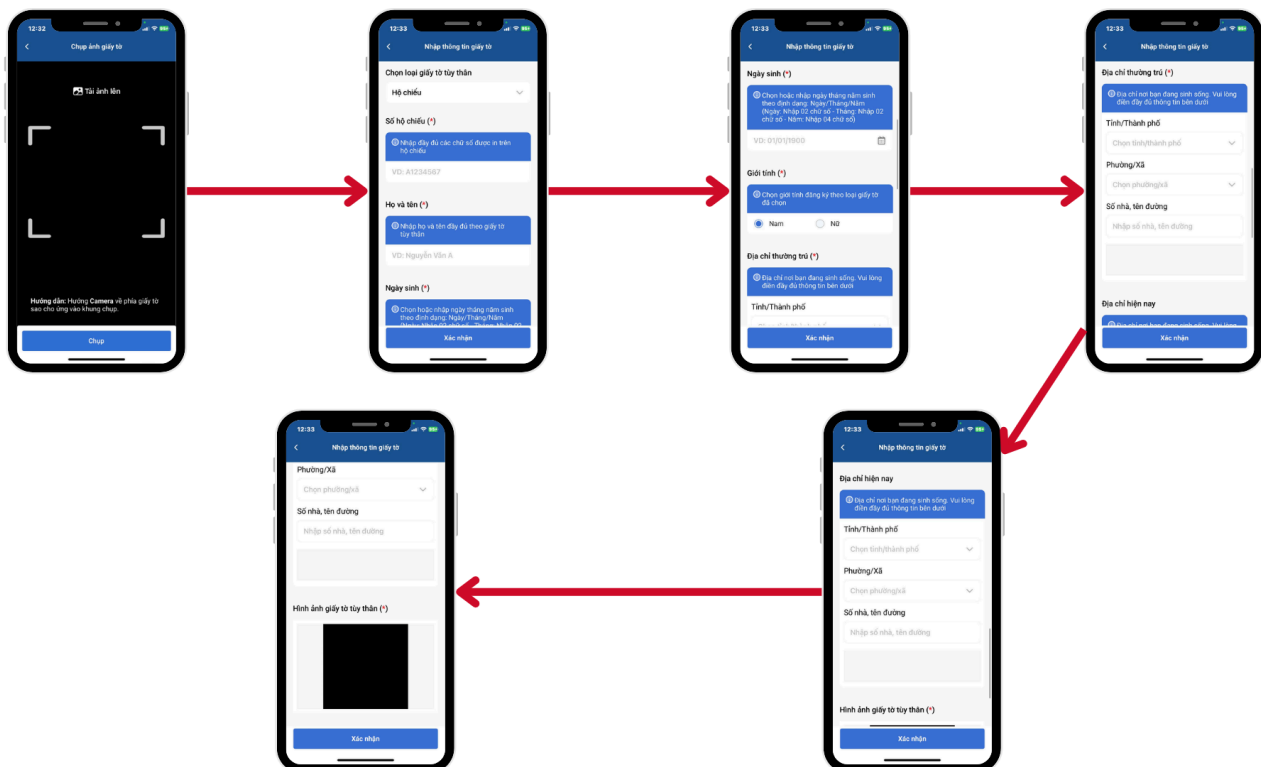

When choosing to register using a citizen ID card, the application will open the in-app camera to scan the QR code or upload the citizen ID card's QR code to scan and automatically fill in the citizen ID information. The user will then verify whether the autofilled information is correct.

After verifying the information, the user will enter their blood donation profile information, including their phone number, email address, and occupation. The user will receive a confirmation code via email and then proceed to enter their password.

Passport Registration:

When choosing to register using a passport, the app will also open the in-app camera and ask the user to point the camera at the document to save the identification information. Then the user will fill in the information from the identification document to complete the blood donation application.

The app supports fingerprint biometric login after the initial login.

Bottom Navigation Bar

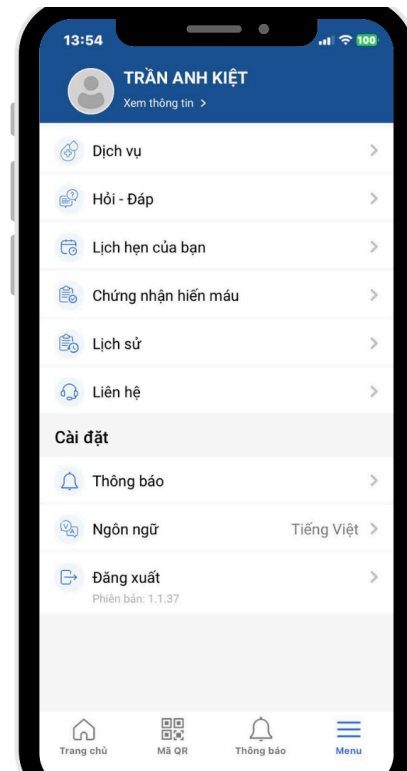

Includes the following sections:

Section	Function
Home (Trang chủ)	Main screen interface
QR Code (Mã QR)	Scan QR code for blood donor profiles and identification documents
Notifications (Thông báo)	App notifications
Menu	Settings, app management, and user profiles

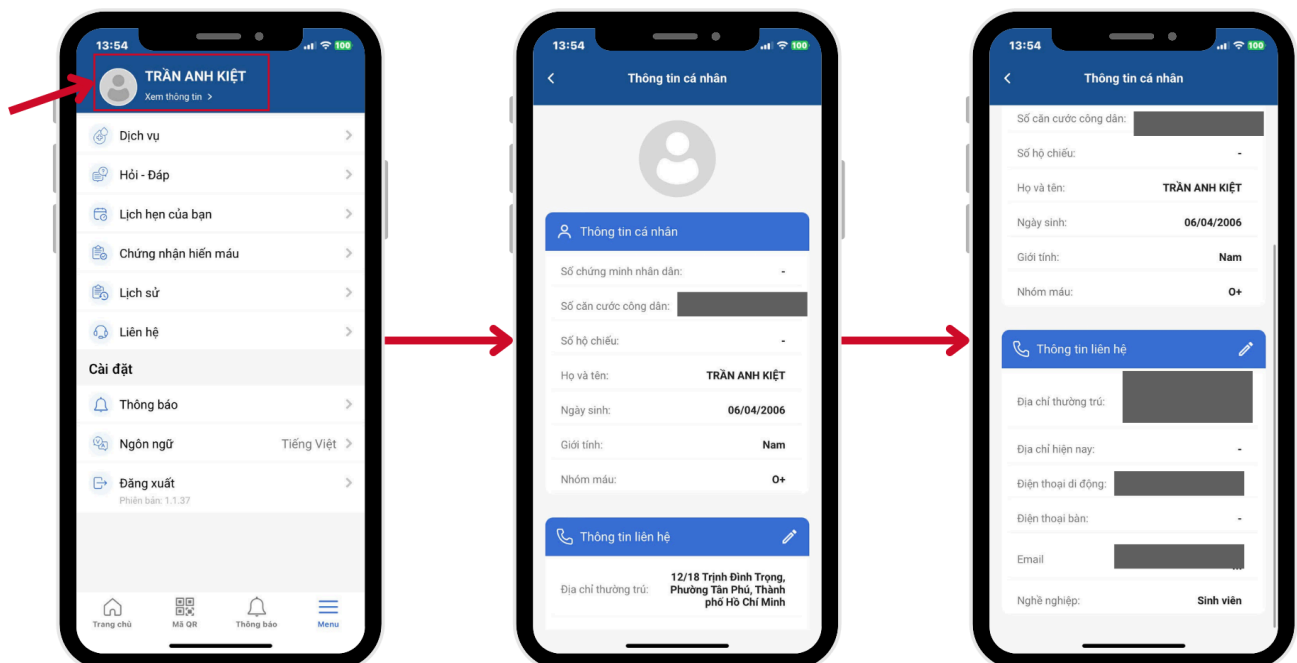

Menu

Manages personal information, schedules, donation history, certificates, and app settings.

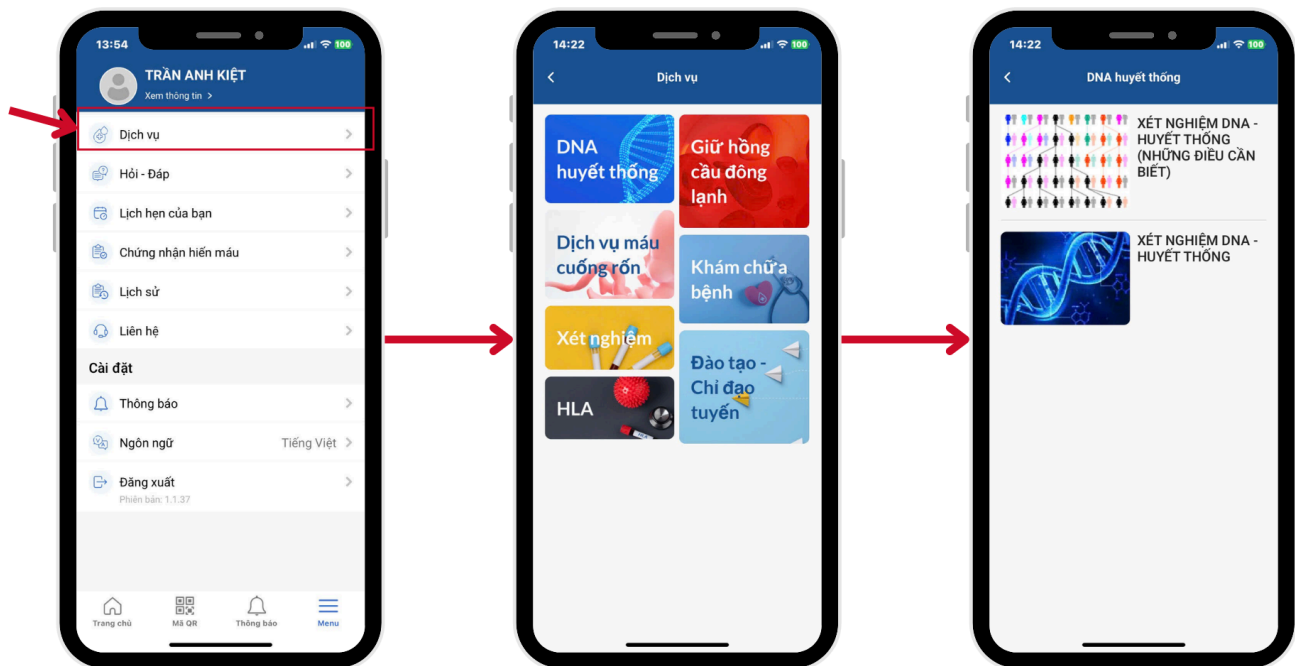

Personal Information

Details provided during registration are saved here.

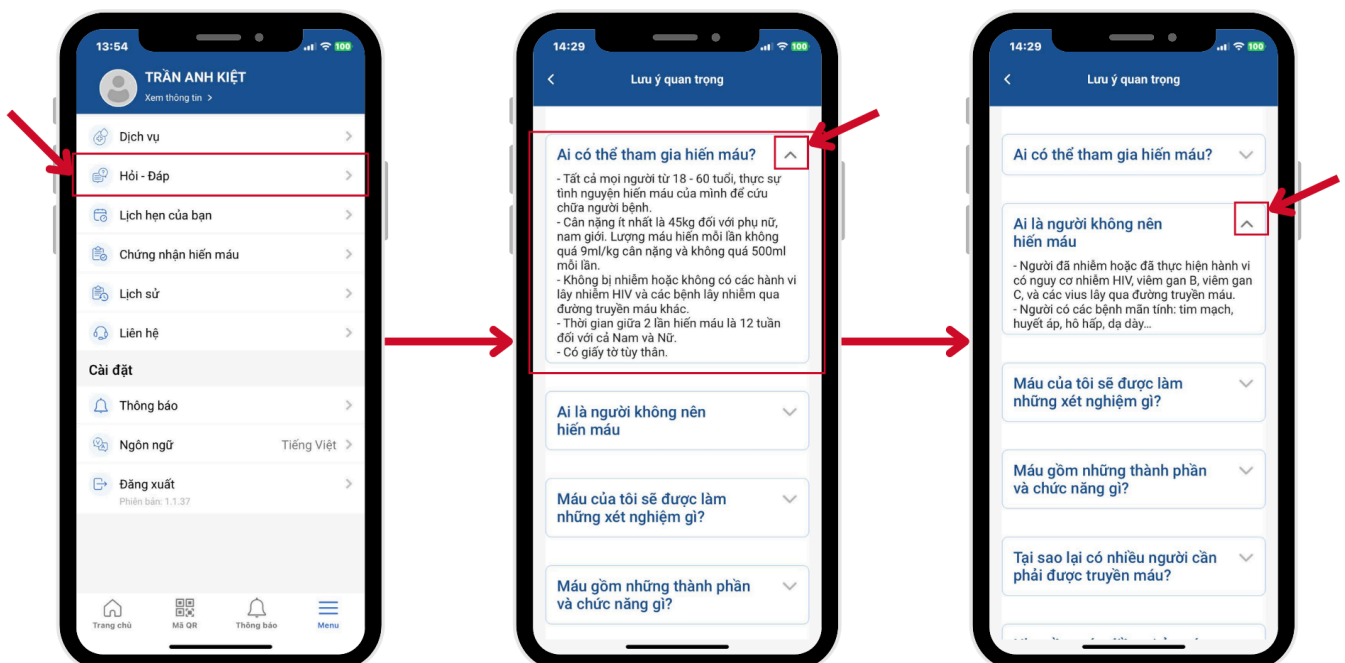

Services

Contains services the application provides to users.

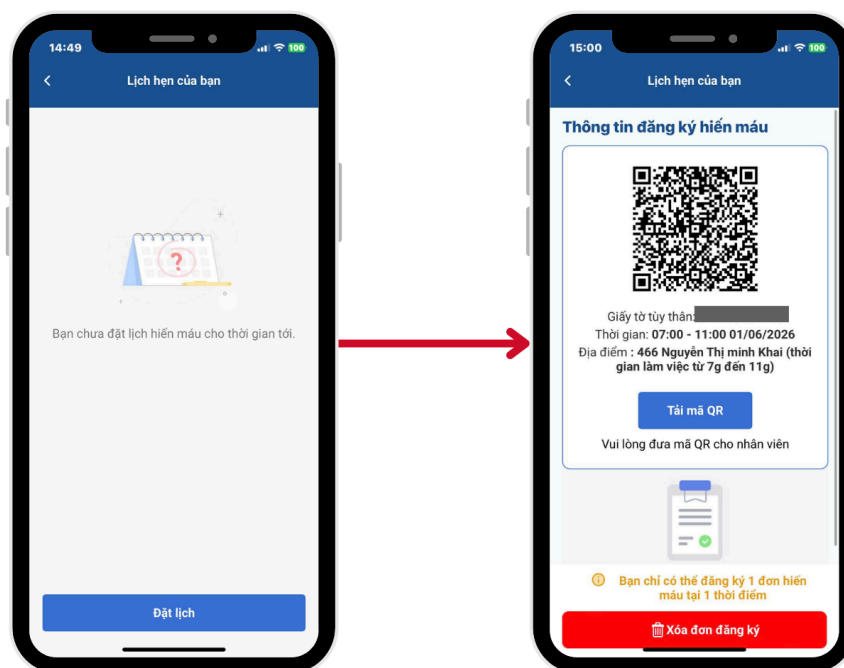

Q&A

This is where you can find answers to important questions and common concerns that most first-time blood donors or those unfamiliar with voluntary blood donation often have.

Your Appointments (Lịch hẹn của bạn)

Stores blood donation appointments booked by the user. If no appointment exists, they can schedule one by clicking the booking button.

Users can download their registration ticket's QR code or cancel their registration by tapping the "Delete registration" button.

After clicking the booking button, the system redirects to a flow where users input the target location and create their donation form.

The sequence of screens for the questionnaire is as follows:

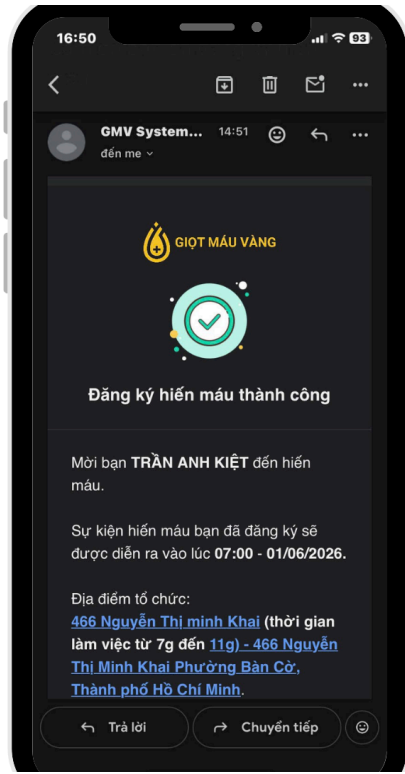

- Screen 1:** Select date and location. Fields: "Chọn ngày" (Choose date), "Địa điểm" (Location), "Tỉnh/Thành phố" (Province/City), "Địa chỉ" (Address). Buttons: "Nhóm màu cần hiển" (Select color group to display), "Nhóm màu A+", "Nhóm màu A-".
- Screen 2:** Select date and location. Fields: "Chọn ngày" (Choose date), "Địa điểm" (Location), "Tỉnh/Thành phố" (Province/City), "Địa chỉ" (Address). Buttons: "Nhóm màu cần hiển" (Select color group to display), "Nhóm màu A+", "Nhóm màu A-".
- Screen 3:** Select date and location. Fields: "Chọn ngày" (Choose date), "Địa điểm" (Location), "Tỉnh/Thành phố" (Province/City), "Địa chỉ" (Address). Buttons: "Nhóm màu cần hiển" (Select color group to display), "Nhóm màu A+", "Nhóm màu A-".
- Screen 4:** Select date and location. Fields: "Chọn ngày" (Choose date), "Địa điểm" (Location), "Tỉnh/Thành phố" (Province/City), "Địa chỉ" (Address). Buttons: "Nhóm màu cần hiển" (Select color group to display), "Nhóm màu A+", "Nhóm màu A-".
- Screen 5:** Select date and location. Fields: "Chọn ngày" (Choose date), "Địa điểm" (Location), "Tỉnh/Thành phố" (Province/City), "Địa chỉ" (Address). Buttons: "Nhóm màu cần hiển" (Select color group to display), "Nhóm màu A+", "Nhóm màu A-".
- Screen 6:** Select date and location. Fields: "Chọn ngày" (Choose date), "Địa điểm" (Location), "Tỉnh/Thành phố" (Province/City), "Địa chỉ" (Address). Buttons: "Nhóm màu cần hiển" (Select color group to display), "Nhóm màu A+", "Nhóm màu A-".
- Screen 7:** Select date and location. Fields: "Chọn ngày" (Choose date), "Địa điểm" (Location), "Tỉnh/Thành phố" (Province/City), "Địa chỉ" (Address). Buttons: "Nhóm màu cần hiển" (Select color group to display), "Nhóm màu A+", "Nhóm màu A-".
- Screen 8:** Select date and location. Fields: "Chọn ngày" (Choose date), "Địa điểm" (Location), "Tỉnh/Thành phố" (Province/City), "Địa chỉ" (Address). Buttons: "Nhóm màu cần hiển" (Select color group to display), "Nhóm màu A+", "Nhóm màu A-".

Once the questionnaire is filled, the booking form is compiled.

The sequence of screens for the booking form is as follows:

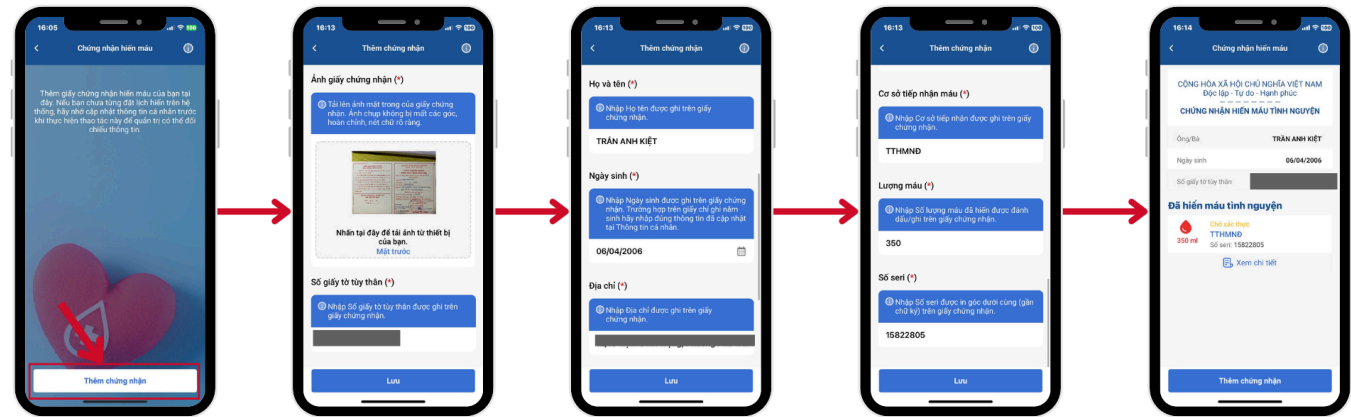

- Screen 1:** QR code and success message. Fields: "Giấy tờ tùy thân" (ID card), "Thời gian: 07:00 - 11:00 01/06/2026" (Time: 07:00 - 11:00 01/06/2026), "Địa điểm: 466 Nguyễn Thị Minh Khai (thời gian làm việc từ 7g đến 11g)" (Location: 466 Nguyễn Thị Minh Khai (working hours from 7g to 11g)). Button: "Tải mã QR" (Download QR code). Text: "Vui lòng đưa mã QR cho nhân viên" (Please bring the QR code to the staff).
- Screen 2:** Personal information. Fields: "Họ và tên" (Full name), "Số chứng minh nhân dân" (ID card number), "Số căn cước công dân" (Citizenship card number), "Số hộ chiếu" (Passport number), "Ngày sinh" (Date of birth), "Giới tính" (Gender), "Nghề nghiệp" (Occupation), "Nhóm máu" (Blood group).
- Screen 3:** Contact information. Fields: "Địa chỉ thường trú" (Permanent address), "Địa chỉ hiện nay" (Current address), "Điện thoại di động" (Mobile phone number), "Email" (Email).
- Screen 4:** Final booking details. Fields: "Địa chỉ thường trú" (Permanent address), "Địa chỉ hiện nay" (Current address), "Điện thoại di động" (Mobile phone number), "Email" (Email).

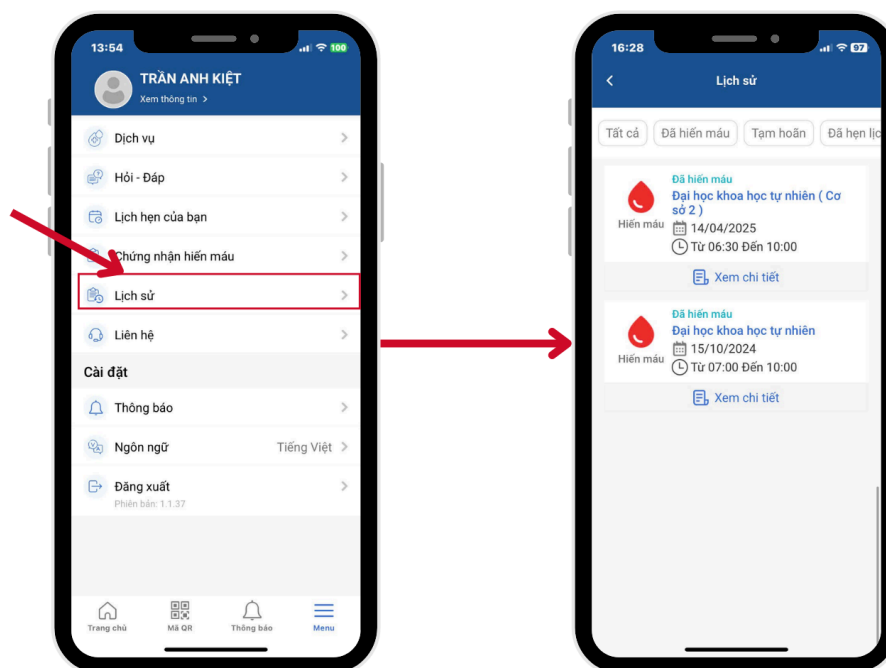

Upon completion, users receive a success notification email.

Donation Certificates & History

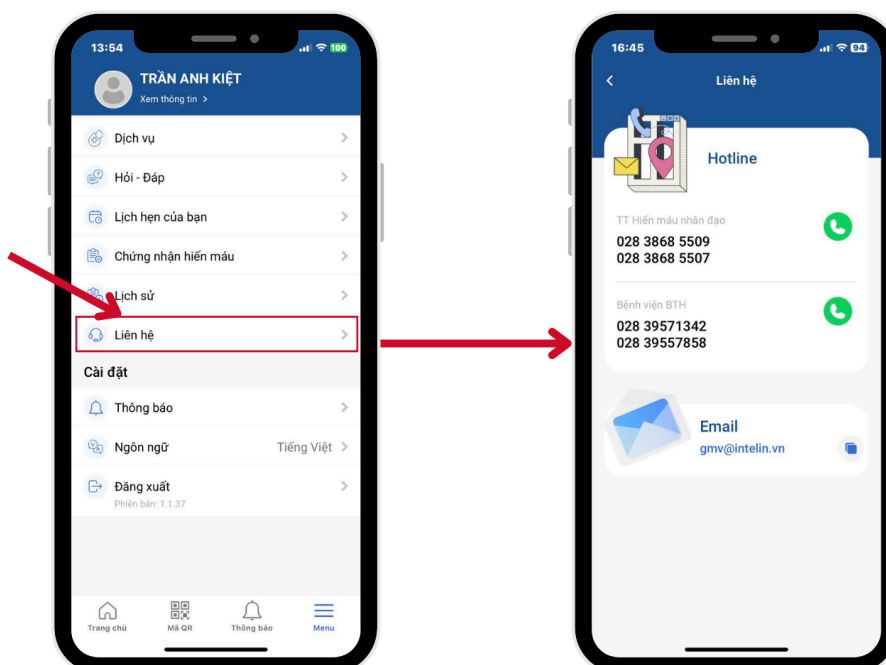

Allows users to personalize their account, saving their certificates and reviewing their history of contribution.

Contact

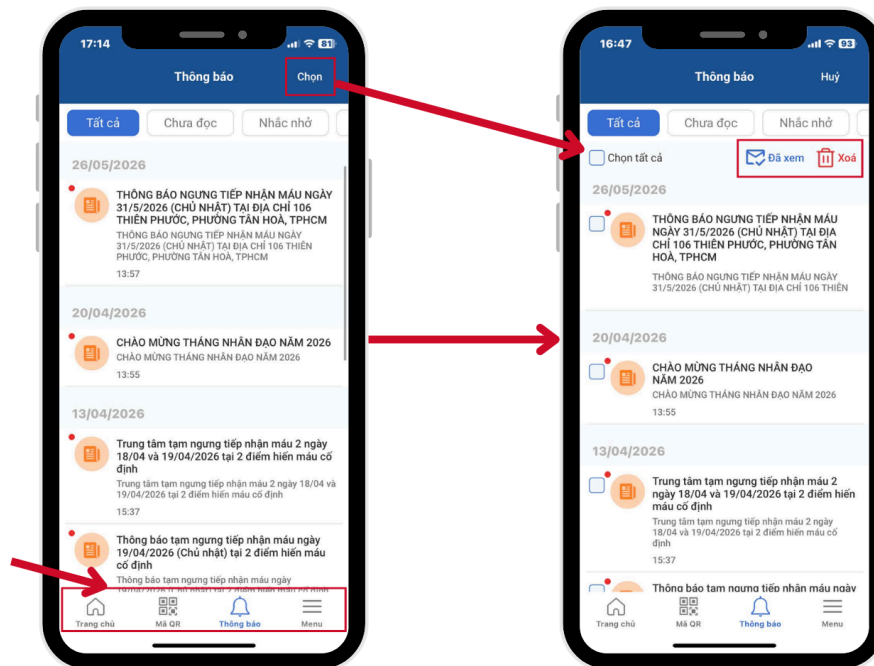

Displays emergency hotlines for the Humanitarian Blood Donation Center and Blood Transfusion Hematology (BTH) Hospital.

Notifications

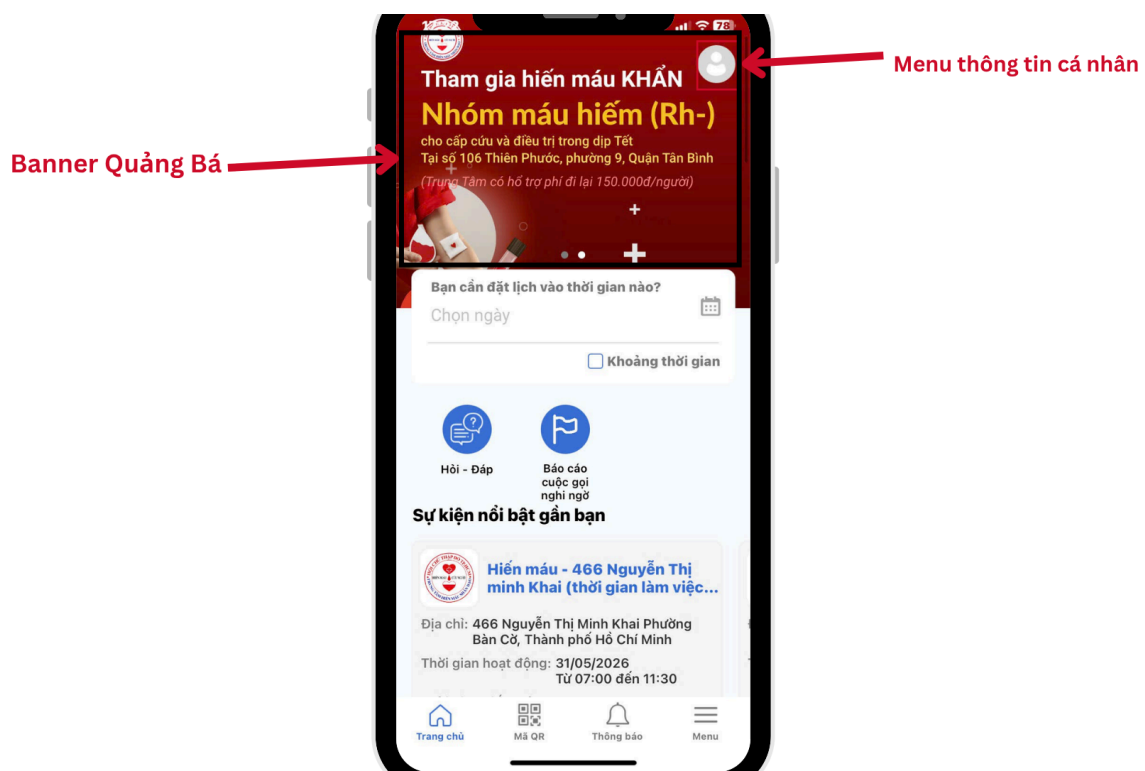

The Notifications section shows the notifications that users will receive from the voluntary blood donation center, including urgent blood donation calls, suspension of blood acceptance at the blood

donation facility, or holiday schedules... Users can also manage notifications such as marking them as seen or deleting them.

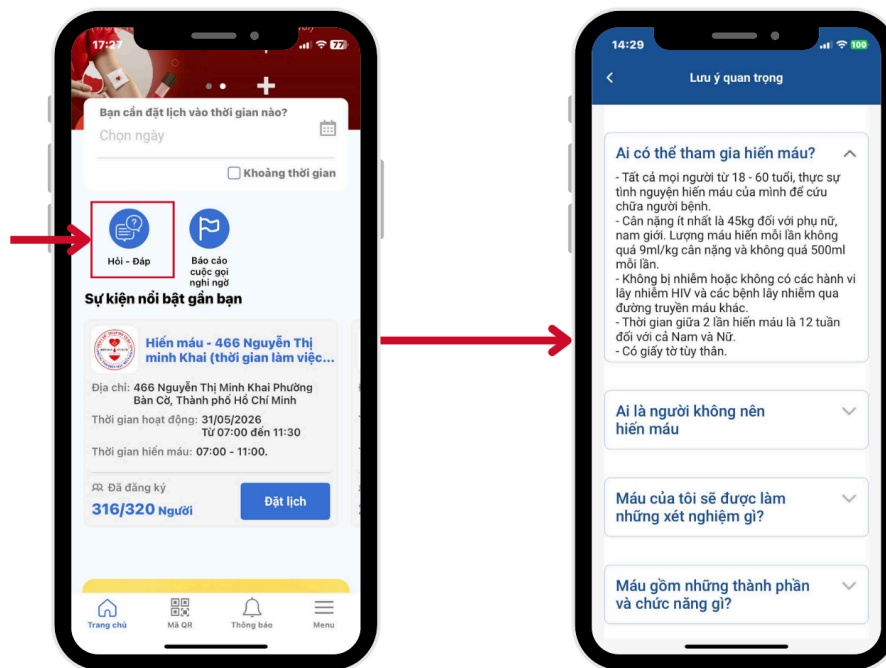

Home Page

The main entry point displaying automated sliding banners at the top, which can also be navigated manually.

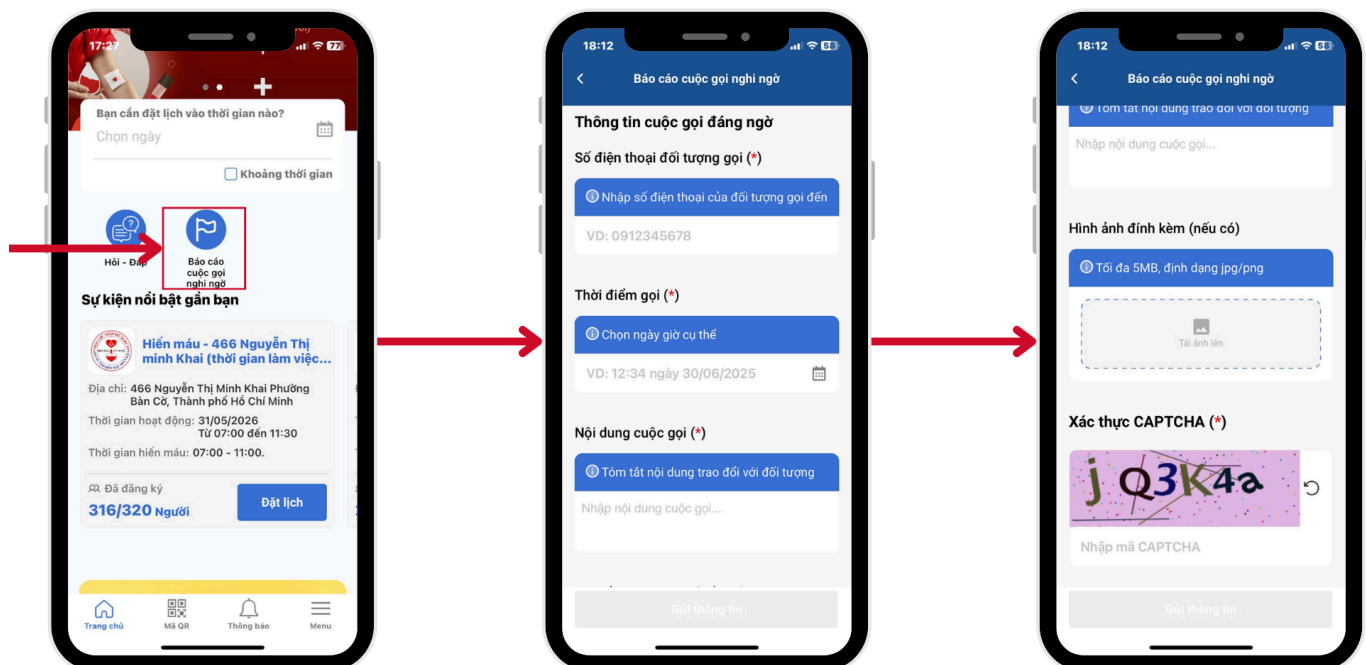

Main Homepage Function Groups

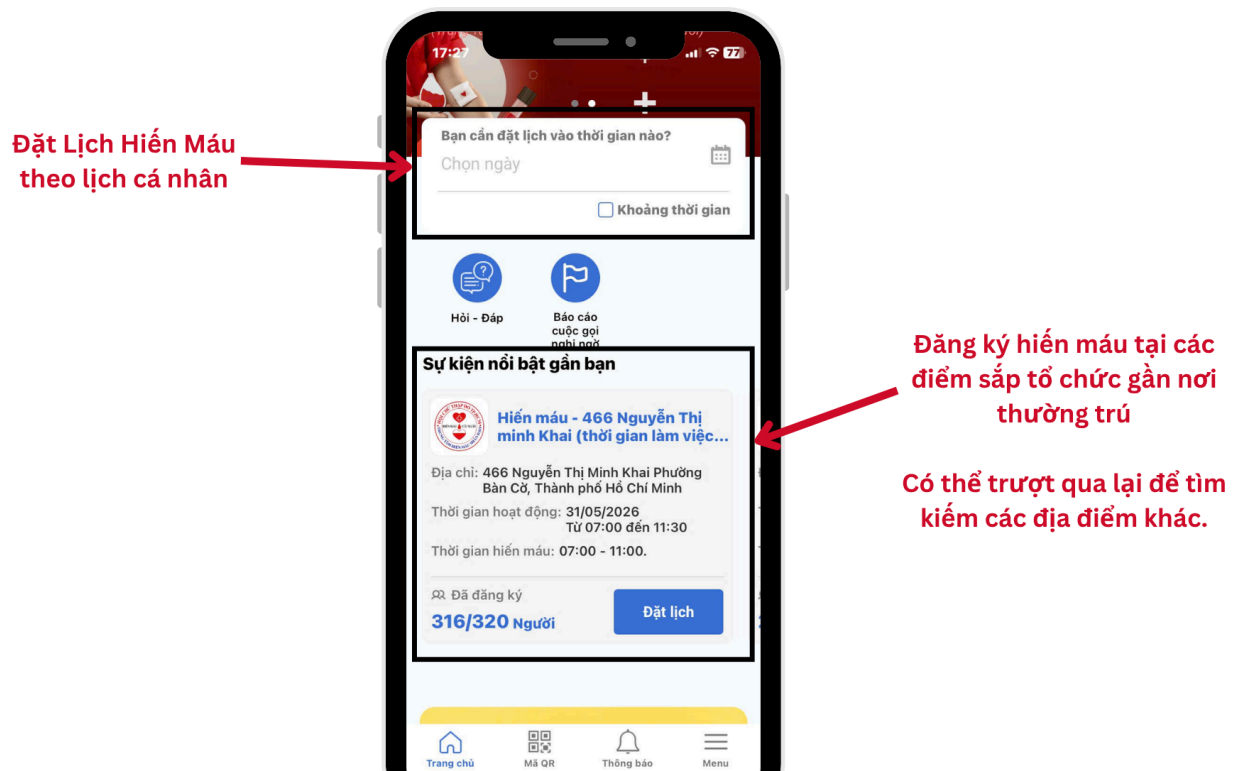

Q&A: Tapping the Q&A icon redirects the user to the FAQ page.

Report Suspicious Calls: Allows users to report fraudulent calls pretending to be from blood donation centers to prevent scams.

Book Appointment: Allows users to schedule a donation and view upcoming nearby events.

User flow

- Step 1: Account Initialization (Sign Up & Log In)
 - Account Registration: Users open the application and select their preferred registration method: Citizen Identity Card (CCCD) or Passport.
 - Automated Data Collection: The app activates the camera, allowing users to scan the QR code (for CCCD) or take a photo (for Passport). The system will then autofill basic personal information.
 - Profile Completion: Users review the pre-filled information and manually enter their phone number, email address, and occupation.
 - Verification & Password Creation: A one-time password (OTP) is sent via email for verification, after which users can set up their account password.
 - Subsequent Logins: Users can quickly log in using biometric authentication (fingerprint).
- Step 2: Search and Book an Online Blood Donation Appointment
 - Search for Donation Sites: Right on the Homepage, users can view emergency blood donation banners or browse upcoming blood donation events near their permanent residence.
 - Booking an Appointment: Users tap the "Book Appointment" button (accessible from either the Homepage or the "Your Appointments" section in the Menu), then select their preferred time and location.

- Filling out the Registration Form: Users answer survey questions regarding their current health status and medical history to generate an online blood donation profile.
 - Confirmation: Upon completing this flow, users will receive a system email confirming that their blood donation appointment has been successfully booked.
 - Step 3: At the Blood Donation Site
 - QR Code Usage: Upon arriving at the scheduled donation site, users navigate to "Your Appointments", open their registration details, and present the QR code to medical staff for rapid check-in. (This QR code can also be downloaded to their computer/phone beforehand).
 - Note: In case of unexpected schedule conflicts, users can cancel their appointment by tapping the "Delete Registration Form" button within this section.
 - Step 4: Post-Donation (Storage & Management)
 - Certificate Update: After completing the blood donation and receiving a physical certificate, users can access the "Donation Certificates" section in the Menu. Here, they can take a photo of the front of the certificate and fill in the required details (receiving facility, blood volume, serial number) for digital storage.
 - Journey Tracking: Users can access the "History" section to review a complete list of all their past blood donation participations.
 - Information Updates: Users can monitor the "Notifications" section to receive new blood donation appeals or alerts regarding the suspension of blood intake from the center.
-

Author: Trần Đức Quý | Review: Trần Anh Kiệt

Website Giọt Máu Vàng (Web Application)

Website Overview

The website 'giotmauvang.org.vn' is a web application belonging to the project "Digital transformation to improve voluntary blood donation management and ensure transfusion safety for Ho Chi Minh City". Launched in 2019, the website is jointly implemented by the HCMC Red Cross, HCMC Computer Association (HCA), Blood Transfusion Hematology Hospital (BTH), HCMC Humanitarian Blood Donation Center, and Quang Trung Software City (QTSC).

User Groups

Blood Donors

- Book blood donation appointments online.
- Track personal donation history.
- Review and rate donation locations/events.
- View and download registration QR codes.

Donation Centers / Organizations

- Accept registrants and manage events.
- Manage blood donation data.
- Create and manage public or private donation drives.

Main Functions

Registration - Login

Select identification type (CCCD or Passport). Verify the document, fill in personal details, phone number, email, and occupation. The system sends an email OTP to verify before the user sets their password.

Lưu ý quan trọng

1. Ai có thể tham gia hiến máu?

- Tất cả mọi người từ 18 - 60 tuổi, thực sự tình nguyện hiến máu của mình để cứu chữa người bệnh.

- Cân nặng ít nhất là 45kg đối với phụ nữ, nam giới. Lượng máu hiến mỗi lần không quá 9ml/kg cân nặng và không quá 500ml mỗi lần.

- Không bị nhiễm hoặc không có các hành vi lây nhiễm HIV và các bệnh lây nhiễm qua đường truyền máu khác.

- Thời gian giữa 2 lần hiến máu là 12 tuần đối với cả Nam và Nữ.

- Có giấy tờ tùy thân.

2. Ai là người không nên hiến máu

3. Máu của tôi sẽ được làm những xét nghiệm gì?

4. Máu gồm những thành phần và chức năng gì?

5. Tại sao lại có nhiều người cần phải được truyền máu?

6. Nhu cầu máu điều trị ở nước ta hiện nay?

7. Tại sao khi tham gia hiến máu lại cần phải có giấy CMND?

8. Hiến máu nhân đạo có hại đến sức khỏe không?

9. Quyền lợi đối với người hiến máu tình nguyện?

Workflow

1. Go to giotmauvang.org.vn, click register, and select CCCD or Passport. Verify OTP and set password.
2. Browse banners or the event list on the homepage. Pick a drive, choose a slot, and answer health history questions. Verify booking and download the QR ticket.
3. Present the QR code on screen to medical staff at the center.
4. Access Certificates, upload the certificate photo, and fill details manually. Review past events in History.

Synthesis, Comparative Analysis & Strategic Product Positioning (LifeLine)

Identified Limitations & Flaws of Existing Systems

Flaws of Giọt Máu Vàng App

- **Dummy Features:** Several functional areas exist only as visual placeholders. For example, the "Services" screen in the menu is non-interactive.
- **Redundant Layouts:** App features are scattered incoherently, duplicating options between the slide-out menu and home screen.
- **No Document OCR:** Although users capture CCCD/Passport images during registration, the app cannot parse the fields. Users must re-enter credentials manually.
- **Poor Performance:** The mobile application exhibits noticeable lagging, stuttering, and unresponsiveness, requiring force-restarts.

Flaws of Giọt Máu Vàng Website

- **Non-Responsive Layout:** The web platform is not fully responsive. Layout elements overlap or require horizontal scrolling when viewed on mobile browsers.
- **Inflexible Registration Form State:** The scheduling wizard has no step-back mechanism. If a selected slot fills up at the final step, users must restart the entire process.
- **Lacks Push Alerts:** The website does not support browser push notifications or automated SMS reminders, leading to high appointment vacancy rates.
- **Text-Only Location Search:** Displays active drives solely as text tables, lacking interactive mapping integrations.
- **No Community Interaction:** Fails to support groups, friend lists, or sharing forums.
- **Manual Certificate Verification:** Lacks OCR for certificate image uploads, requiring manual data transcription.
- **No Public Reviews:** User feedback on center quality is collected but kept hidden, losing positive social proof opportunities.

Gaps in App Hiến Máu

While functionally complete, the application operates as a standalone scheduling tool. It does not integrate with real-time hospital databases, lacks dynamic inventory alerts, and contains no automation for emergency volunteer matching.

Unified Comparison Matrix

The table below compares the functional metrics of Website GMV, App GMV, App Hiện Máu, and the proposed **LifeLine** system.

Metric	Website GMV	App GMV	App H.Máu	LifeLine (Proposed)
Auth	ID / Passport	ID / Passport	Phone / GG	Unified (ID/Passport/SSO)
Autofill	None (Manual)	None (Camera)	None	Automated OCR Parsing
Scheduling	Yes (Date)	Yes (Fixed)	Yes	Dynamic Workload Balancing
Form Progress	No (Restarts)	No	No	Auto-save & Step Navigation
Screening	Static forms	Static forms	Static forms	AI Conversational Chatbot
GIS Map	No	No	Yes	Enhanced Route Finder
Community	No	No	Yes	Community Hub & Events
Alerts	Email / SMS	Push Alerts	Push Alerts	Real-time WebSockets & SMS
Certificates	Manual upload	Manual upload	Yes	Encrypted Verifiable E-Certs
Scam Reporting	Yes	Yes	No	Automated AI Fraud Detection
SOS Alerts	No	No	Stats only	Live Hospital Dashboards
Engagement	No	No	No	Gamified XP, Badges & Tiers
Hospital Portal	No	No	No	Real-time Inventories & Expiration Alerts
Matching	No	No	No	AI-Coordinated Direct SOS

Security & Personal Data Compliance (CCCD/Passport Processing)

Both Giọt Máu Vàng platforms process sensitive identification documents (CCCD and Passports). Under **Decree 13/2023/ND-CP on Personal Data Protection (Vietnam)**, collecting and storing raw images of citizens' IDs poses high compliance risks.

The proposed **LifeLine** system will address this issue with the following data security policies:

1. **On-device OCR Processing:** Perform OCR parsing client-side using lightweight local models. Raw images of the ID card are parsed immediately to populate form fields and are **never uploaded or stored** on the cloud server.
2. **End-to-End Encryption:** Encrypt parsed text data using AES-256 during transit (SSL/TLS 1.3) and at rest in the database.
3. **Role-Based Access Control (RBAC):** Restrict access to identification metrics. Medical staff scan check-in QR codes to view basic donor details temporarily, but they cannot access or export full identity records.

Preliminary Technology Stack Recommendations

To address the performance flaws (sluggishness, lack of responsiveness, lack of real-time support) observed in the surveyed platforms, we propose the following Tech Stack for **LifeLine**:

- **Web Portal (Hospitals & Admin Panel):** Next.js (React) with Server-Side Rendering (SSR) for fast load times, combined with TailwindCSS.
- **Backend API & Real-time Services:** Node.js (NestJS) and Python.
- **Data Storage:** PostgreSQL (relational database for profiles, schedules, and transactions).
- **AI & Document Scanning:** Google Cloud Vision API or Tesseract OCR to support high-accuracy OCR extraction of identity documents and paper certificates.

Strategic Opportunities & Product Differentiation for LifeLine

Direct Hospital Connection & Live Supply Dashboard

Unlike existing solutions that function as passive appointment systems, **LifeLine** bridges the gap between hospitals and donors:

- Connected hospitals get a secure backend dashboard showing their current blood inventory levels.
- Hospitals can issue geo-fenced **SOS urgent alerts** via WebSockets when specific blood supplies drop below thresholds.
- The system provides **automated expiration alerts** to hospitals, notifying them when stored blood units are nearing their expiration dates.

AI-Driven Conversational Pre-screening

Replaces long, static medical survey forms with a conversational AI assistant. Using Natural Language Processing (NLP), the chatbot pre-screens users in a friendly, conversational manner and checks on their recovery status post-donation.

Predictive AI Coordinated Matching for Emergencies

Predictive models analyze local historical donation frequencies, seasonal hospital shortages, and blood expiration rates. In case of emergency shortages, eligible matching donors are identified and contacted via automated notifications.

Gamification for Periodic Blood Donor Retention

Low retention is a common issue for existing applications. **LifeLine** will incentivize recurring donations through gamified components:

- Experience points (XP) for blood donations and community contributions.
- Achievement badges (e.g., "First Drop", "Lifesaver Medal").
- Blood donor tiers (Bronze, Silver, Gold, Platinum) linked to volunteer privileges.

Dynamic Capacity Balancing

To prevent overcrowding at centers, the booking wizard will dynamically calculate slot capacities. If a center experiences high volume, the app will recommend nearby alternative sites.

Recommended UI/UX Design Patterns to Adopt

We will adopt and refine the following successful patterns from the surveyed systems:

1. **Clean Bottom Navigation:** Home, History, QR Code, Notifications, and Menu.
2. **Prominent Profile Header:** Red-themed top panel showing greeting, blood type, total donation count, and eligibility status.
3. **Quick Access Grid Menus:** Grid of colorful icons on the home screen for major activities (Schedule, Map, FAQ, Community, Support).
4. **Interactive GIS Map:** Visual search for nearby active donation drives.
5. **Sliding Promotional Banners:** Broadcasting urgent appeals, donor packages, and community achievements.
